**FIXED LOD:** Calculated sales for each Category regardless of region and segment:

This was done by fixing the sales value in the regions of a particular category. I created a calculation field where I included a syntax for the Fixed LOD and applied it.

	South	242	125,651
	West	226	220,853
Technology	Central	216	170,416
	East	238	264,974
	South	242	148,772
	West	226	251,992

## **EXCLUDE LOD: Total sales excluding the Category:**

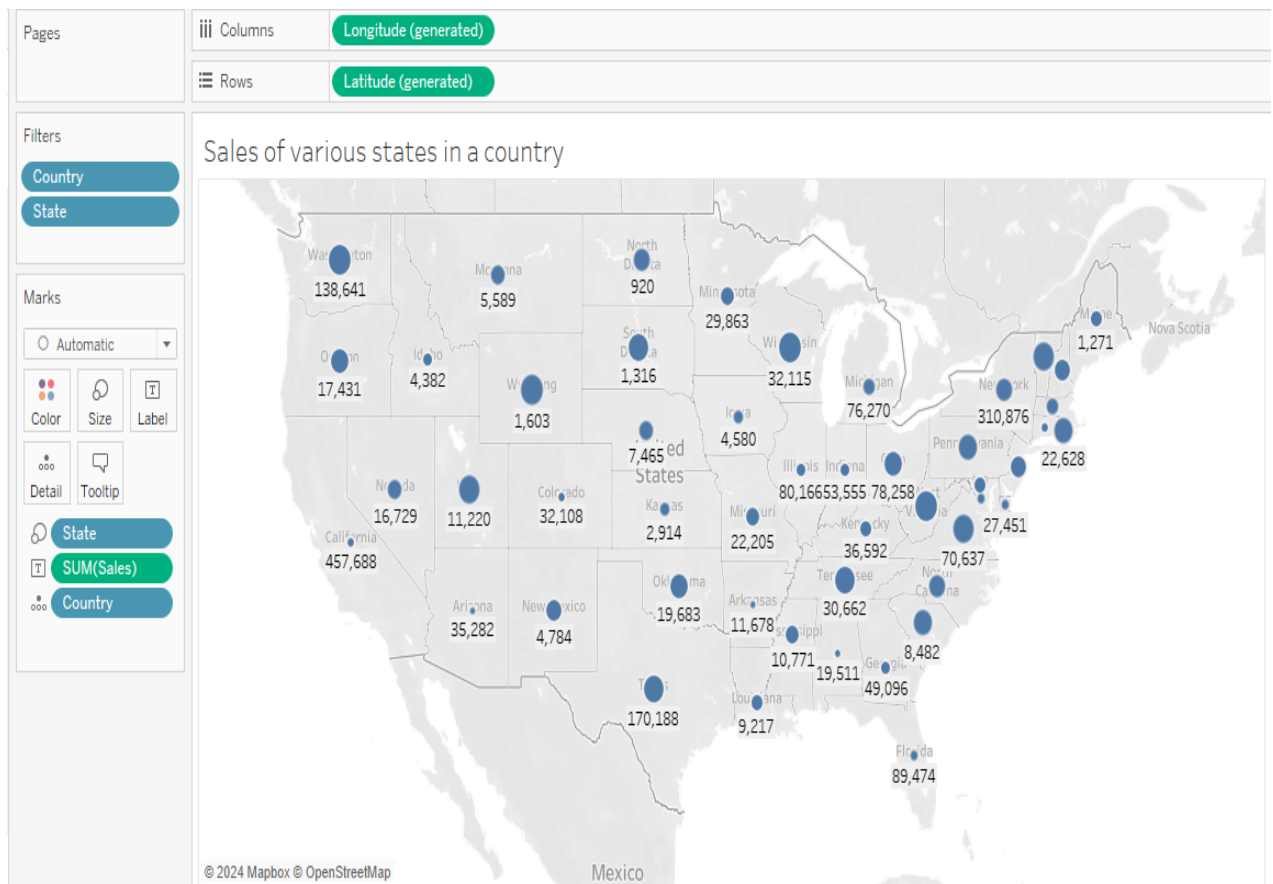

This was done by excluding the average sales values of the regions for each category. I created a calculation field which included a syntax for Exclude LOD and applied it.

# TASK 2

## Map Visualization 1: State wise profit in a country:

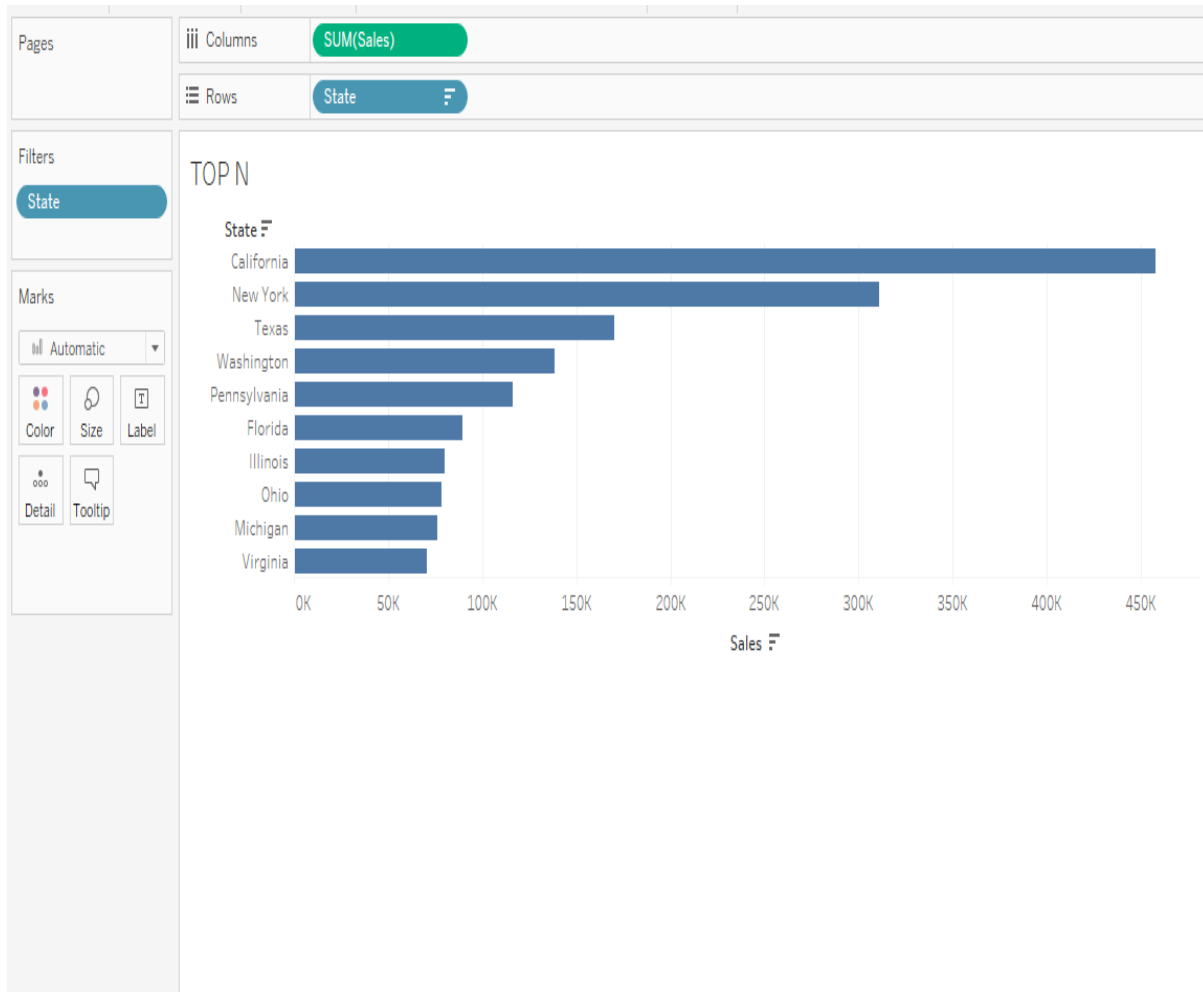

Created a map with the help of longitude and latitude measures. After choosing a country (USA), represented it's states with different colors and added an additional measure i.e., the profit values of each state in the country.

## Map Visualization 2: State wise sales in a country:

Created a map with the help of longitude and latitude measures. After choosing a country (USA), represented it's states in different sized dots and adding an additional measure i.e., sales of different states in the country.

# TASK 3

## Top N Parameter:

Calculated the sum of sales with respect to different states and represented the data in the form of bar graph. Then applied the filter to the state dimension using TOP and then creating a parameter named Top N by applying the condition as top 10 states having max sum of sales.
